

The Admin Scripts Page in PoolParty

This section provides an overview of the functions and tools you can access through the **Admin Scripts** menu entry.

In the **TOOLS** menu in the toolbar the entry **Admin Scripts** takes you to a new page (tab) of your PoolParty client browser.

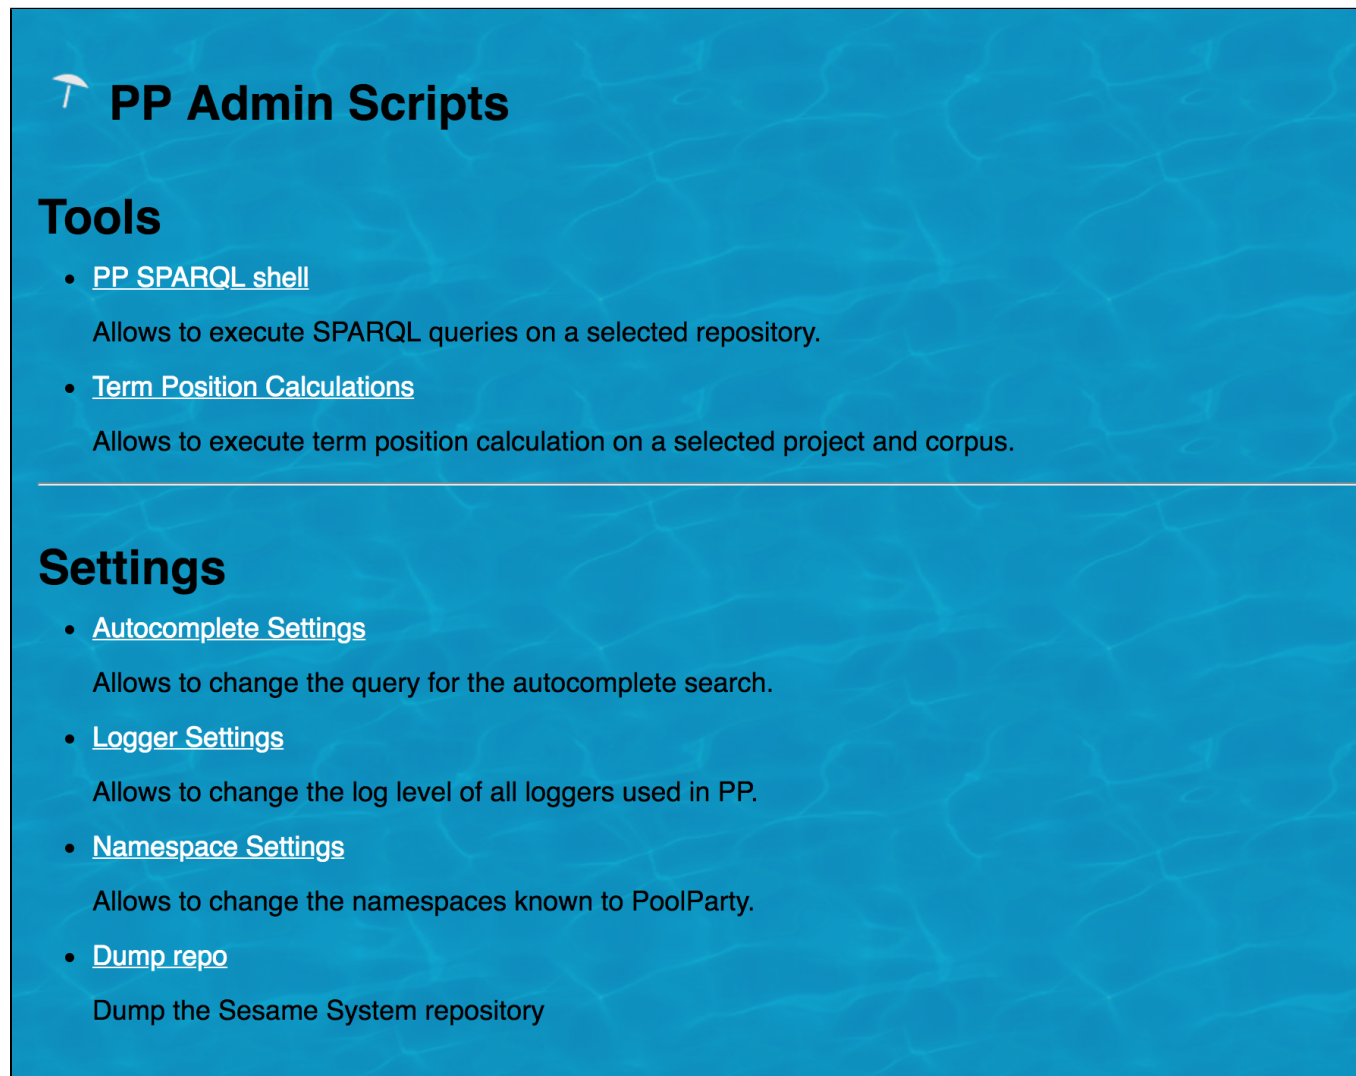

The following settings and tools are available there:

Tools

- [PP SPARQL shell](#)
- [Term Position Calculations](#)

Settings

- [Autocomplete Settings](#)
- [Logger Settings](#)
- [Namespace Settings](#)
- [Dump repo](#)

PP Admin Scripts

Tools

- [PP SPARQL shell](#)
Allows to execute SPARQL queries on a selected repository.
- [Term Position Calculations](#)
Allows to execute term position calculation on a selected project and corpus.

Settings

- [Autocomplete Settings](#)
Allows to change the query for the autocomplete search.
- [Logger Settings](#)
Allows to change the log level of all loggers used in PP.
- [Namespace Settings](#)
Allows to change the namespaces known to PoolParty.
- [Dump repo](#)
Dump the Sesame System repository

 You need **PoolPartySuperAdmin** rights to be able to access the page.
